

# Backpacking Equipment List

Try to reduce your pack weight by seeking a lighter alternative. Use a kitchen scale, which calculates ounces in order to take off the pounds. Use the scale to make choices, like which socks to take. Try to double up on applications – for example, rain pants can double as your pair of long pants.

We'll help you check your gear before the trip, and we'll also weigh packs. Ideally your pack should weigh less than 50 lbs at the start of the trip. Less than 40 is even better. **Leave room for the food and community gear. This usually adds about 10 -12 lbs.**

---

## **GEAR** (*available for rent*):

- Backpack, with waterproof pack cover. You'll need at least 4500 cu in. capacity, which can be comfortable with 40 – 50 lbs. The pack itself doesn't need to weigh more than about 4 lbs empty.
- Tent, with ground cloth cut to size or footprint.
- Sleeping bag rated to 20 F. Down is lighter than polyfil and compresses better. We're dry enough here in the Northern Rockies so you don't have to be concerned about dampness. Our REI Sub kilo 20s weigh less than 2 pounds and compress to cantaloupe size.
- Sleeping pad. Lots of different varieties. Some options: Thermorests, which are a bit heavier but more hardy. Big Agnes, ExPed, or REI inflatable pads, which are very light weight and comfy, but take some time to inflate. The Z-rest. It is light and hardy, but it's bulky.

## **CLOTHING**

\*Quick-dry fabrics preferred. The exception is the cotton t-shirt. This list includes the clothes you'll be wearing. Our temperatures range from 60F to 90F during the days, 50 – 70F evenings, and 30 – 50F at night.

- Boots. Medium-weight recommended, broken in but not broken down. With your pack weight reduced you can forego the heavy boots of yore, and your feet will appreciate it. Since you will be 40 lbs heavier than usual, get boots that are half a size larger. Also your feet expand when they're warm. Gore-tex lined boots can be hot, which results in blisters. However, if you have and love Gore-tex boots, use them. Also, get SuperFeet, SOLE insoles, or something similar. They're a lot more comfortable than the cheesy cardboard ones that come with the boots.
- Running shoes or sturdy Tevas (or something similar) for wading streams. You'll need stability as well as gripping treads for crossing rocky stream bottoms while carrying a heavy pack. You'll also use these around camp. Crocs are the new lightweight alternative, if you don't have wobbly ankles.
- 3 pairs of wool or quik-dry blend socks. Liner socks optional. Wash 'em out en route.
- Pair of long pants, or zip-offs, which takes care of the hiking shorts too. Good for chilly evenings and chilly mornings;
- Pair of hiking shorts. We encounter little underbrush to endanger your legs.
- T-shirts. 2 are sufficient, with one being cotton. This is the ONE EXCEPTION to the no-cotton rule. On hot days cotton keeps you cooler.
- Underwear. 3 sets are all you need. Wash 'em out.

- Longjohns. Polypro, capilene, or wool. Top & bottom.
- Long sleeved wool sweater or polarfleece. Last is lightest.
- Rain Jacket AND Rain pants. A poncho won't work here. When it rains it's windy too.
- Gaiters. Essential for rainy hiking.
- Lightweight wool or polypro gloves.
- Hat with a brim.
- Warm skull cap for those nippy mornings.

## ACCESSORIES

\* Some items we can share (#); we can discuss these items the evening before the trip.

- Trekking poles. We recommend the 2-pole method. They're great for stream crossings, and they save your knees for future treks.
- Stuff sacks. Sea to Summit makes waterproof virtually weightless stuff sacks. Color-coded for size. 13-liter and 4-liter ones are most useful. Better than a pack cover for really keeping your sleeping bag and clothing dry in a deluge.
- 1 extra gal-size ziplock and 1 large garbage bag for isolating wet things.
- Daypack. Lightweight, but roomy for our outings from camp on layover days. Your stripped down backpack can work too. **(optional)**
- Crazy Creek or some other light camp chair for comfort in camp. REI makes a nice, light weight chair with legs. **(optional)**
- Compressible camp pillow. A down vest makes a great pillow and is handy for the cold mornings. **(optional)**
- Headlamp. Bring one set of spare batteries.
- Bowl. Plastic. A Rubbermaid 3-cup size is perfect. Leave the top at home.
- Spoon. Ultralite is nice. Better than a spork.
- Cup. Non-metal so you won't burn yourself.
- 2 Water bottles. One should be a wide mouth liter bottle to make filling water easier. The second can be a collapsible one, but preferably still a liter in size. Some days we will be traveling where water is scarce, so you should have the ability to carry 64 oz. of water. Camelbacks are fine if you are used to using them, but not recommended if you are looking to buy something. If you use the Camelback, make sure you have another container to make filling en-route easier.
- Toilet paper in a ziplock, with matches. You don't need much. One roll for a 10 - 12 day trip is sufficient. We will go over our backcountry bathroom methods the day before trip.
- Small bottle of waterless hand sanitizer. Excellent for hurried hygiene.
- Small towel (or bandana) and small biodegradable camp soap for body and clothing. You still have to use it away from the streams. Which leads us to the next item. . .

- Small collapsible doggy bowl or bucket- ideal for laundry & bathing. Keeps your soapy water out of the stream. Some folks use an extra stuff sack.
- Baby wipes and/or facial cleansing wipes. These are weightless, pre-soaped, and great for hygiene. They do not biodegrade, so we have to pack them out or burn them. **(optional)**
- Toothbrush, floss & toothpaste.
- 4 clothespins for hanging laundry. **(optional)**
- Sun block & chapstick with sun block.
- Sun glasses.
- Trowel. If you have one, but we bring two or three in the group gear as well. #
- Pocketknife
- Camera. **(optional)**
- Insect repellent. Small bottle of deet works great. **(optional)**
- 50' light rope to hang food so the bears won't get it, or for laundry. Not everyone needs to carry this. We will distribute the night before trip. #
- Fishing tackle. Ask before you bring to make sure we will have ample opportunity. **(optional)**
- Water purification. We provide Aquamira drops for loan for water purification along the trail, but if you prefer a different method, feel free to bring it along. If you are buying a product especially for this trip, we recommend the Steri-pen Adventurer Opti. For more info about backcountry water treatment, view the **"Water Treatment"** PDF on our website.
- Reading material. Lightweight. Fun to swap. May also serve as fire starter in wet weather.
- Binoculars. **(optional) #**

## FIRST AID KIT

\*Two of the guides will also be carrying complete first aid kits, so you can keep yours to the essentials.

- prescriptions
- pain reliever like ibuprophen or acetaminophen
- antihistamine
- antacid & anti-diarrhea tabs
- bandaids, antiseptic
- blister protection care products (A MUST!!!)
